Education

Sagi Rama Krishnam Raju Engineering College (2024 - Present)	CGPA : 8.9 / 10
Bachelor of Technology (Computer Science and Engineering)	
Sr junior college (2022 - 2024)	CGPA : 9.5 / 10
Board of Intermediate Education	
Little Buds (EM) High School (2021 - 2022)	CGPA : 9.2 / 10
Board of Secondary Education	

Technical Skills

- Python, Java
- Web Development
- Version Control
- NLP

Soft Skill

- Analytical
- Organized
- Communication
- Quick Learning

Work Experience

Data Science & AI Intern	Jul 2025 - Aug 2025
Edunet Foundation	
- Successfully finished a 6–8 week national-level AI/ML internship with the AICTE–Edunet Foundation, where I delivered two comprehensive machine learning projects tailored to real-world applications. - Built, trained, and optimized 3+ machine learning models in Python, achieving a ~20% improvement in data preprocessing efficiency and clearer analytical visualizations. - Cleaned, transformed, and examined 1,000+ structured data records, performing exploratory data analysis (EDA) to identify trends and modeling features. - Completed project milestones within defined timelines, demonstrating effective execution of AI-driven solutions from data preparation to model validation.	

Projects

Smart Irrigation System	Github
- Designed and deployed an AI-based predictive irrigation system that assessed environmental data to reduce estimated water usage by 15–25% across simulated scenarios. - Modeled irrigation demand using regression and time-series forecasting on soil moisture, temperature, and humidity data, improving prediction reliability and decision accuracy. - Developed interactive dashboards displaying 5+ performance metrics, enabling stakeholders to identify trends and make data-driven irrigation decisions. - Trained and tested machine learning models using Python and Scikit-learn on datasets exceeding 1,000 records, tracking accuracy, precision, and recall metrics, Streamlit Interface .	
Fake News Detector	Github
- Architected a machine learning-based fake news detection system using NLP, feature extraction, and classification algorithms to address misinformation in textual data. - Engineered a modular and scalable codebase with separate preprocessing, training, and evaluation components, improving code readability and reducing experimentation time by ~40%. - Achieved 80%+ classification accuracy through feature engineering and hyperparameter tuning, improving model performance and consistency. - Executed an end-to-end ML pipeline using Python and Scikit-learn, covering data preprocessing, model training, validation, and evaluation.	

Certifications

- Foundations of Artificial Intelligence- IBM
- ELITE Certification - NPTEL
- Python Essentials 1 - Cisco
- Google Android Developer - EduSkills
